

tesa® 4289

Heavy duty tensilised, abrasion resistant film tape

tesa® 4289 is a heavy duty tensilized polypropylene film tape with a natural rubber adhesive system.

With the tensilized film, tesa® 4289 features very high tensile strength with low elongation at the same time. This tape is very abrasion and tear resistant. The rubber based adhesive system, giving a relatively high bond for a surface protection tape, will not leave adhesive residue when removed.

Intended use:

This tape doubles as a bundling and packaging tape. It is often used in packaging plastic components, for example, in the packaging of new appliances and electrical devices because the film will not break and the adhesive will remove cleanly. In surface protection applications tesa® 4289 offers the same toughness with no adhesive residue.

Technical Data

Backing:	Tensilized Polypropylene
Types of Adhesive:	Natural Rubber
Color:	Yellow
Total Thickness:	.0059" (150 µm)
Adhesion to steel:	50.2 oz/in (5.5 N/cm)
Tensile Strength:	214 psi (375 N/cm)
Elongation:	35%

User Benefits

- Residue free removal
- No discoloration
